

Complete Service Manual coverage for Mercedes-Benz vehicles consists of:

- Service Manual, Engine
- Service Manual, Chassis and body
- Service Manual, Automatic Climate Control

Throughout these manuals, the vehicles are identified by their chassis and engine numbers. These numbers are made up of the first six digits of the respective serial number. For the actual location of chassis and engine numbers, see page 00-015/1. In case where the repair instructions apply to all versions, only the first three digits of the respective number are referenced.

For example, chassis 124 applies to all 124 models. However, chassis 124.090 would only apply to model 300 TE.

**Location of specific repair instructions**

First locate the Group No. in the Group Index. Individual groups are separated by an easily visible dividing page, which is followed by the job index page. Then check the job index for the exact job required. The first page of a typical job description looks like this:

83-630 Removal and installation of circulating pump

83.1-630/1

Technical data, tightening torques and tools are listed at the beginning of each job.

All dimensions are in metric units, unless otherwise indicated. Any part numbers given are only used for identification and easier differentiation between individual components, and are not intended for ordering purposes.
